

Leverage existing information in Active Directory

Customer Benefits

- ◆ **Accountability of Access and Entitlements – Internal and External Users**
- ◆ **Streamlined Approvals and Audits - User Accounts and Entitlements**
- ◆ **High ROI—Cost, Time and Productivity—Employees and Contractors**

AD-centric User Security

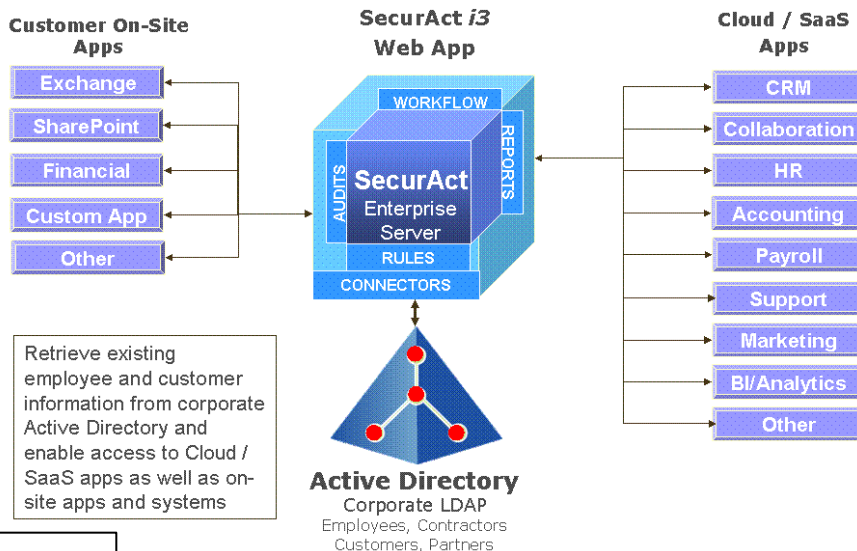

SecurAct's scalable *Innovative Intelligent Infrastructure (i3)* is purpose-built to address *End-to-End User Security*—User Accounts and Entitlements Management, as well as User Audit and Compliance needs. It seamlessly fits into a company's existing environment, leveraging existing user and customer information in corporate Active Directory. Its unique architecture and implementation allows easy integration with a variety of applications and systems—including Cloud / SaaS, custom, enterprise, mobile and other applications and systems.

SecurAct i3 addresses the following common IT challenges:

- ❑ Painful managing users and groups in Active Directory
- ❑ Lack of control and visibility over user accounts and entitlements
- ❑ High cost of managing user accounts and entitlements across applications and systems
- ❑ Tedious manual processes for employee and contractor on-boarding, role changes, off-boarding
- ❑ Difficulty meeting regulatory compliance and audit requirements
- ❑ Security risk from unauthorized user accounts

Highlights

- Rapid delivery and ease-of-use
- Automate approval processes
- Adapt to changing requirements
- Protect current investments
- Lowest total cost and time
