

User-centric Security for Cloud Computing™

Bridging Cloud / SaaS and On-site Environments

Customer Benefits

- ◆ **Accountability of Access and Privileges – Internal and External Users**
- ◆ **Streamlined Approvals and Audits - User Accounts and Privileges**
- ◆ **High ROI—Cost, Time and Productivity—Employees and Contractors**

Next-generation Solution

SecurAct's scalable *Innovative Intelligent Infrastructure (i3)* is purpose-built to address *End-to-End User Security*, User Accounts and Privilege Management, as well as User Audit and Compliance needs. It seamlessly fits into a company's existing environment. Its unique architecture and implementation allows easy integration with a variety of applications and systems—including Cloud / SaaS, custom, enterprise, mobile and other applications and systems. Using the SecurAct *i3* solution, customers can implement access control for *Internal Users – Employees and Contractors* – as well as for *External Users – Customers and Partners*.

SecurAct addresses the following common IT challenges:

- ❑ High cost of managing user accounts and privileges
- ❑ Lack of control and visibility over user accounts and privileges
- ❑ Tedious manual processes for employee and contractor on-boarding, role changes, off-boarding
- ❑ Difficulty meeting regulatory compliance and audit requirements
- ❑ Inability to enforce business rules
- ❑ Security risk from unauthorized user accounts

Key Benefits

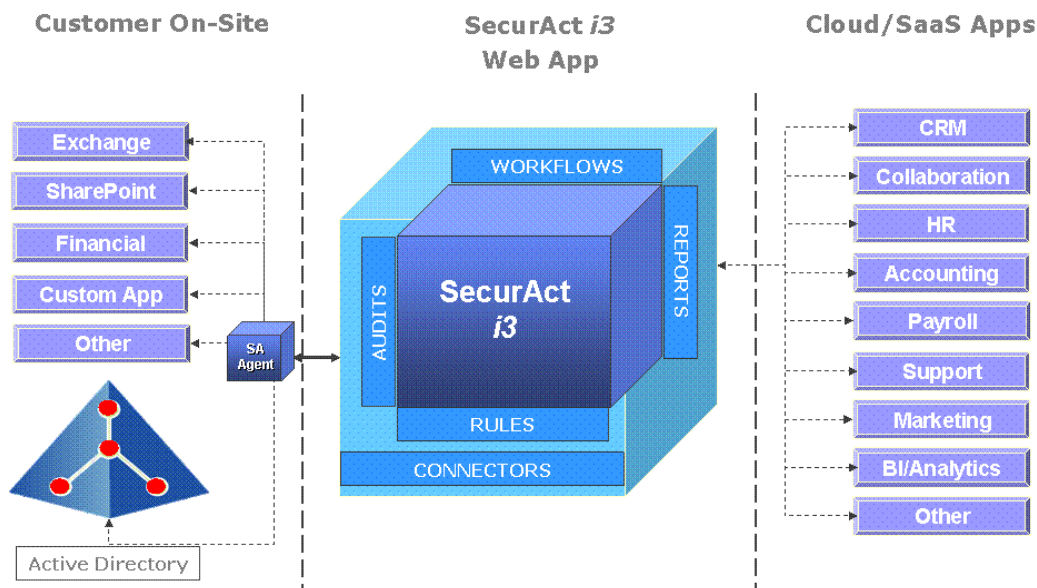

- | |
|---------------------------------|
| Rapid delivery and ease-of-use |
| Automates approval processes |
| Adapts to changing requirements |
| Protects current investments |
| Lowest total cost and time |

Complex User Security Nightmare

Technology and Customer Environment

SecurAct’s unique modular architecture is designed to provide a configurable user-centric security management solution to easily automate existing approval processes, and overcome shortcomings of existing systems—such as being difficult to integrate into existing environment, hard to deploy and use, expensive, and not easily configurable. The SecurAct extensible architecture allows rapid addition of customer-specific features, such as templates to allow grouping of provisioning requests for users with similar profiles.

Typical Customer – Hybrid Environment – Cloud / SaaS and On-site Apps

The system’s ease of use is enabled by its wizard-driven interface, seamless application registration, and flexible approval workflow capabilities. Support for configurable attributes allows integration of a wide variety of applications, which is difficult to accomplish with existing systems. The flexible workflow engine allows for sequential and parallel approvals, as well as escalations. Technologies used make it easy to get a system up and running rapidly, with no programming.

Key Features	Technology Advantages
Seamless Application Registration	Easy to integrate into existing heterogeneous environments
Flexible and powerful Approval Workflows	Accountability of user accounts and privileges
Configurable Attributes, Rules and Policies	Flexible and adaptable to different environments
Comprehensive Audit and Compliance Reports	Visibility and control over user accounts and privileges
Modular Component-based Architecture	Extensible to rapidly meet customer needs
Standard Light-weight Connectors	No programming and minimal integration work
